Excel Microsoft Excel allows importing and exporting drawing information. This can be done via the Windows API or via the Visual Basic for Applications (VBA) scripting interface. Excel also contains a large number of VBA macros, Excel-based add-on applications, which can also access drawing information. R For several years, Autodesk has included access to AutoCAD data in the core product. A proprietary language called R, based on the R programming language, is used to extract data from AutoCAD. The formats of extracted information include DrawingML (via XML) and DXF (via DXF Import and Export Wizards). R is a scripting language that runs in the AutoCAD environment. R allows users to access AutoCAD's data and perform actions through the AutoCAD application. To do this, R users program scripts that are stored in XML files or as AutoCAD user macros. AutoCAD Architecture AutoCAD Architecture is a software program, developed by Autodesk Inc, that is meant to improve productivity for architects, engineers, and interior designers. Architects and engineers who work with AutoCAD Architecture can run a "triangle" toolset, which contains common CAD and text tools for a building project. AutoCAD Architecture operates in both a web browser and on the Microsoft Windows operating system. It also includes a project library that contains drawings and associated drawings. History AutoCAD Architecture was released on May 14, 2007. In 2010, AutoCAD Architecture 2.0 was released. In 2014, Autodesk decided to replace the Web based application, with a dedicated Windows application called AutoCAD Architecture Desktop. This replaced the AutoCAD website on the web, but does not replace the mobile apps that were formerly available on iOS and Android platforms. Features The main features of AutoCAD Architecture include: Simple Online data storage Web browser based online data storage Reduced on-screen clutter Data mining capabilities Project tracking Data management AutoCAD Architecture is meant to help architects and engineers manage a project with data, as well as have data stored online for access. This means that the project is easily accessible to other project team members. There are two different ways to access data: Data Cloud Projects are saved into the Cloud for easy access online.
